

16th Annual Bangs Mayfest Festival

- Electrical Connection Requirements -

For the safety protection of you, our vendors, and all our Festival visitors, we require specific electrical connections.

We supply 120V 20 amp circuits.

Vendors requiring electricity must supply:

- **GSCI protected extensions cords** – reset button to protect against ground fault and accidental shorts or shocks.
- **Minimum 12 gauge.**
- **Must be in excellent condition** – no splices or exposed wires.

Please understand why we have these requirements.

- *Smaller or damaged cords overheat*
 - *Electrical shocks to those attending.*
 - *Sparks and small fires can occur.*
 - *Causes electrical breakers to trip affecting not only the vendor with the bad connection but fellow vendors on the same circuit.*

***Thank you for complying with this requirement –
Help us provide a safe environment for our Festival!***
